

FULLSEAL™ APPLICATOR GUN

A new, easy loading applicator gun for the injection of FULLSEAL™

The nature of injecting FULLSEAL™ for Dead Service Insertion often requires the operative to be inside a tight cupboard within the customer's property. With that in mind Steve Vick International has brought out the new user-friendly FULLSEAL™ applicator gun.

This light weight alternative to traditional hinged applicator guns allows FULLSEAL™ cartridges to be connected to the Service Head Adaptor first, then effortlessly side loaded into the gun. Also if additional FULLSEAL™ cartridges are needed the applicator gun is easily removed allowing for quick installation of a new cartridge.

**Lightweight
and quick
to load!**

NEW

Unlike similar applicator guns the FULLSEAL™ gun has a 18:1 pump ratio giving an increased pushing force without increasing the labour required. The rigid frame is non-rotating which allows for improved stability when changing cartridges.

FEATURES

- Side loading
- Powerful 18:1 pump ratio
